

Final Project: Project ideas

Due Nov 4, 2021

1. Source: <https://catalog.data.gov/dataset/national-student-loan-data-system>
 - Describe: Student Debt by School Code
2. Customer: Students and Parents looking to see the trend of student debt
3. Problem: Student debt can be so bad in specific low-income school codes
4. Product Vision: If parents or students can look at different graphs and data analytics they may be able to see a trend, and maybe that would help them know how to eliminate some debt.
5. Major Features: Click and look on each city in map view, you can filter by student employment status, gender, or age. Maybe sort by degrees in different school codes.
